Day 22: Burp Suite Setup & Website VAPT

Topics Covered:

- Installing Burp Suite Professional on Windows
- Setting up FoxyProxy for browsers
- Understanding VAPT Reports

Burp Suite Pro Installation in Windows

1. **Download FoxyProxy:** Get it from your browser's extension store.
2. **Download and Extract Burp Suite Pro:** Get the package and unzip it.
3. **Configure FoxyProxy:**
   - Go to FoxyProxy > Options > Proxies > Add.
   - Name: BurpSuite
   - IP Address: Local IP from Burp Suite (usually 127.0.0.1)
   - Port: Usually 8080 (check Burp > Proxy > Options)
   - Save and enable the proxy.
4. **Start Burp Suite:** Launch it, create a project, enable Intercept, and watch web traffic.

VAPT Report

VAPT reports summarize vulnerabilities found. They include:

- Vulnerability details and severity
- Affected URLs
- Proof of concept (screenshots)
- Recommendations for fixing issues

Burp Suite helps gather evidence for VAPT reports.
